

Custom Kit Packing

SAVE TIME AND MONEY WITH OUR EXPERTISE AND PRODUCTS

Custom Kit Packing

LEAVE THE PRODUCTION TO US

If you're designing and marketing procedural kits, you can realize cost efficiencies and minimize hassles by outsourcing the packaging. B. Braun's OEM division can provide service and production capabilities to allow you to focus more intently on your core design competencies.

Outsourcing can free up internal resources, reduce costs, accelerate time to market and provide end-users with improved product functionality. Working with B. Braun will help you overcome capital and facility constraints, which lets you reallocate resources towards projects with a more lucrative return on investment.

PEACE OF MIND COMES STANDARD IN EVERY PACKAGE

B. Braun's OEM Division has decades of experience producing kits. Our capabilities allow us to package standard components with your proprietary items to meet the requirements of your procedure.

We are FDA registered and ISO 13485:2012 certified. Our quality systems fulfill the requirements of 21 CFR 210, 211 and 820.

Our in-house EtO sterilization offers quick turnaround and adheres to the applicable requirements of EN550 and ISO 11135-1: 2012. B. Braun's upfront involvement of sterilization experts with design and packaging engineers ensures compatibility of your kit with the sterilization process.

CHOOSE FROM PROVEN PRODUCTS

Save money with our purchasing power. We stock more than 700 standard kit components – including drapes, CSR wraps, syringes and needles, dressings and securement devices, procedural drugs, gloves and more– from almost 100 vendors. We've already sourced and qualified the components, relieving you of this costly and time-consuming task. If you're looking for a component we don't stock, we can source it from one of our qualified suppliers.

We also offer the full compliment of B. Braun products, including needle-free valves, adapters, Introcan Safety® IV Catheters, Safecan™ Safety Introducer Needle, IV sets, extension sets and caps. These products can deliver a simple, reliable solution for your kits admixture and fluid administration needs.

THINK OUTSIDE THE TRAY

We have the experience and capabilities to package kits in blister packs, header bags or pouches. Our engineers can help you design a package that meets the demands of your end-users while saving materials and money.

ALL YOUR KIT RESOURCES UNDER ONE ROOF

Collaborating with B. Braun's OEM Division on your kit is the difference between working with a vendor and working with a true partner. Our experienced design and packaging engineers are on call to collaborate with you on a design that renders optimal performance and cost-effectiveness. Using our existing validated tray configurations saves you time and money. Our in-house tool shop can also develop molds for a custom tray design.

Our fully-staffed clinical lab will perform sterility, toxicity and EtO residual testing and assist with validation requirements. Our regulatory team will guide you through the approval process and mitigate any risks before they occur.
