Custom Kit Packing

OEM Division

Leave the production to us

If you're designing and marketing procedural kits, you can realize cost efficiencies and minimize hassles by outsourcing the packaging. B. Braun OEM Division can provide the services and production capabilities to allow you to focus more intently on your core design competencies.

Outsourcing can free up internal resources, reduce costs, accelerate time to market, and provide end-users with improved product functionality. Working with B. Braun can overcome capital and facility constraints and permit your company to reallocate resources toward projects with a more lucrative return on investment.

Peace of mind: standard in every package

B. Braun OEM Division has decades of experience producing kits. Our capabilities enable us to package standard components with your proprietary items to meet the requirements of your procedure. We can also manufacture your proprietary product, if needed.

We are FDA registered and ISO 13485:2003 certified. Our quality systems fulfill the requirements of 21 CFR 820.

Our in-house EtO sterilization — one of the largest in North America — offers quick turnaround and adheres to the applicable requirements of EN550 and ISO 11135.

And B. Braun's upfront involvement of sterilization experts with design and packaging engineers ensures compatibility of your kit with the sterilization process.

Choose from proven products

Save money with our purchasing power. We stock more than 700 standard kit components — including drapes, CSR Wrap, syringes and needles, dressings and securement devices, procedural drugs, gloves and more — from almost 100 vendors. We've already sourced and validated the components, which relieves you of this costly and time-consuming effort. If you're looking for a component we don't have in stock, we can obtain it from one of our reliable sources.

Additionally, we offer the full complement of proven B. Braun products, such as our valves, adapters, Introcan Safety® IV Catheters, Safecan™ Safety Introducer Needle, IV sets, extension sets, and caps. They can deliver a simple, reliable solution to your kit's admixture and fluid administration needs.

Beyond trays

We can help you think outside the tray. We also have the experience and capabilities to package kits in blister packs, header bags or pouches. Our engineers can help you design a package that meets the demands of your end-users while saving materials and money.

Benefit from our expertise

- Working with B. Braun OEM Division for your kit packaging needs gives you access to unparalleled experience during the entire product lifecycle.
- Our experienced in-house design and packaging engineers stand ready to review your designs for optimal performance and cost-effectiveness.
- Our existing validated tray configurations can save you time and money. We can also tool molds for custom tray designs.
- Our fully staffed, in-house clinical lab will perform sterility, toxicity and EtO residual testing and assist with validation requirements.
- Our in-house regulatory guidance can help expedite approval and identify potential pitfalls before they occur.
